

Network ThreatPak

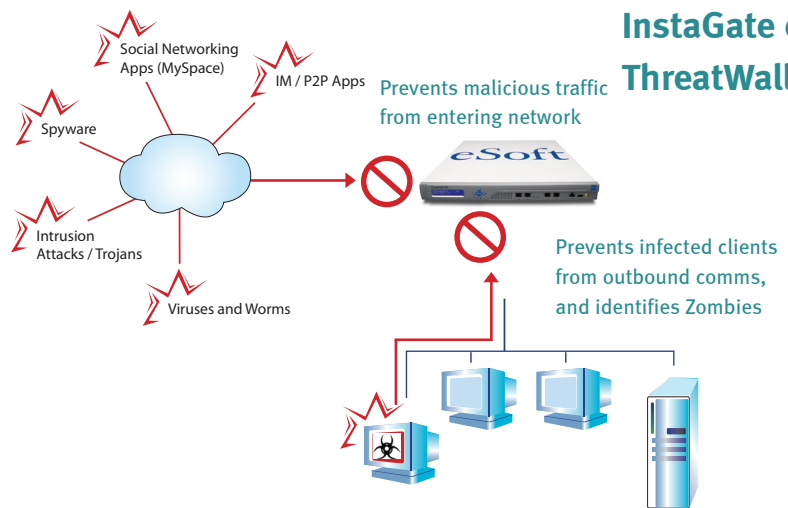

Network ThreatPak - The only software you need for complete network protection

Modern network threats such as Spyware, Worms and Trojans were built to bypass traditional firewalls. Worse yet, technologies such as Instant Messaging (IM) and Peer to Peer networking have opened up serious holes in the security fabric that are incredibly hard to detect and prevent.

The Network ThreatPak combines many of eSoft's proven security technologies to provide the network and its users protection from the dynamic threats that cause network outages, Virus infections, Spyware installs and loss of intellectual property.

Features at a glance:

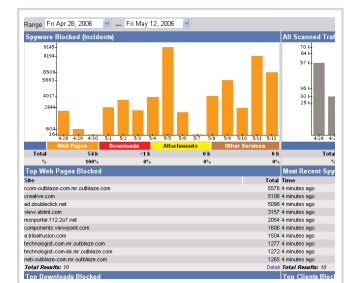

- Real-time Spyware Protection
- Active Intrusion Prevention
- Gateway Anti-Virus for Web and FTP
- Instant Messaging and P2P Application Control
- MySpace and "Social Networking" Application Control
- eSoft Distributed Intelligence Architecture Integration
- Detailed Reporting and Statistics

InstaGate or ThreatWall

Real-time Spyware Protection

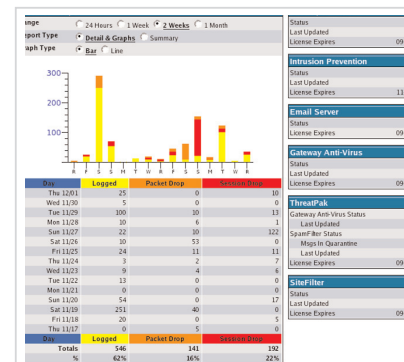

Combines signature matching, intrusion prevention and web filtering techniques to detect and prevent Spyware from infecting the network, whether delivered by web, email or other delivery mechanisms. Infected computers on the internal network are also detected and blocked from sending private data to Internet collection sites. Stops new Spyware infections and eliminates resource drains that result from reactive measures of constantly scanning and cleaning each computer on the network.

Easy-to-read graphs and reports show what Spyware has been exposed, and who is infected

Active Intrusion Prevention

Automatically detect and block malicious network intrusions, Worms and Trojans that occur at the network and application layers. Protects critical server and database services such as Apache, Outlook/Exchange, Oracle, SQL and others. Intrusion Prevention blocks attacks in real-time with rapid packet analysis, and automatically logs the attack for reporting or forensic analysis. Signature updates are automatically downloaded to ensure protection from the latest threats.

Full Proxy-based Anti-Virus

Using the most thorough proxy-based technologies available, eSoft GAV features a large databases of known virus signatures, providing protection from viruses, worms and other threats carried over Web, FTP and other protocols. Both outbound and inbound traffic is scanned to stop infected content from entering or leaving your network.

Real-time statistics on Intrusion attacks gives the IT manager a better tool for making policy decisions

Instant Messaging, P2P and Social Networking Application Control

IM, P2P and Social Networking sites pose huge security risks to the network. Network ThreatPak allows the IT manager to monitor and enforce use policies on IM, P2P and social networking sites such as MySpace and Friendster.

Part Numbers

Network ThreatPak	1 Year Subscription
InstaGate 404	IG404-NTPAK-1
InstaGate 604	IG604-NTPAK-1
InstaGate 806	IG806-NTPAK-1
ThreatWall 250	TW250-NTPAK-1
ThreatWall 450	TW450-NTPAK-1
ThreatWall 650	TW650-NTPAK-1
