

SiteFilter™

Features at a glance:

- 30 Content Categories with Millions of URLs
- Anti-Spyware and Phishing Protection
- Automatic Updates
- Custom Categories
- Authentication
- User/Group Policies
- Day/Time Policies
- Active Directory Integration
- Logging and Reporting
- Custom White/Black Lists
- Custom URLs
- Integrated Web Caching
- Custom Block Message
- Simple Installation
- Web Based Administration

SiteFilter™

Assure maximum workforce productivity by monitoring and enforcing the use of company Internet resources. SiteFilter also protects against legal liability brought on by inappropriate/illegal use of Internet resources. A database containing millions of global URLs is continually updated with web sites in 30 categories. Policy based control allows selection of which categories should be blocked at different times of day, and which users are affected.

Key Features

By filtering irrelevant and unproductive Internet content, SiteFilter is an effective tool for implementing Internet security policies and user guidelines. SiteFilter manages employee web access, reduces the exposure of potential legal liability to the organization, preserves network bandwidth otherwise consumed by employees surfing the Internet and reduces the time and expertise required of vital support resources.

SiteFilter can manage Internet access at several levels ranging from simple access restrictions to thorough blocking of all sites deemed unproductive or non-business related. IT manager has complete control of enforcing what sites individual users or groups of users can access on a day/time scheduled basis. When integrated with Active Directory users are transparently authenticated and assigned the appropriate web access policy. Detailed reporting then allows a convenient way to summarize and report on actual usage. The large URL database is updated automatically with newly categorized websites through eSoft's patented SoftPak Director threat response architecture, and administrators can add their own custom URLs to the database. With an access control list containing millions of categorized URLs and a selection of different content groups, SiteFilter lets organizations implement a highly customized and fine-grained web access policy.

SiteFilter: Powerful Policy Based Web Filtering

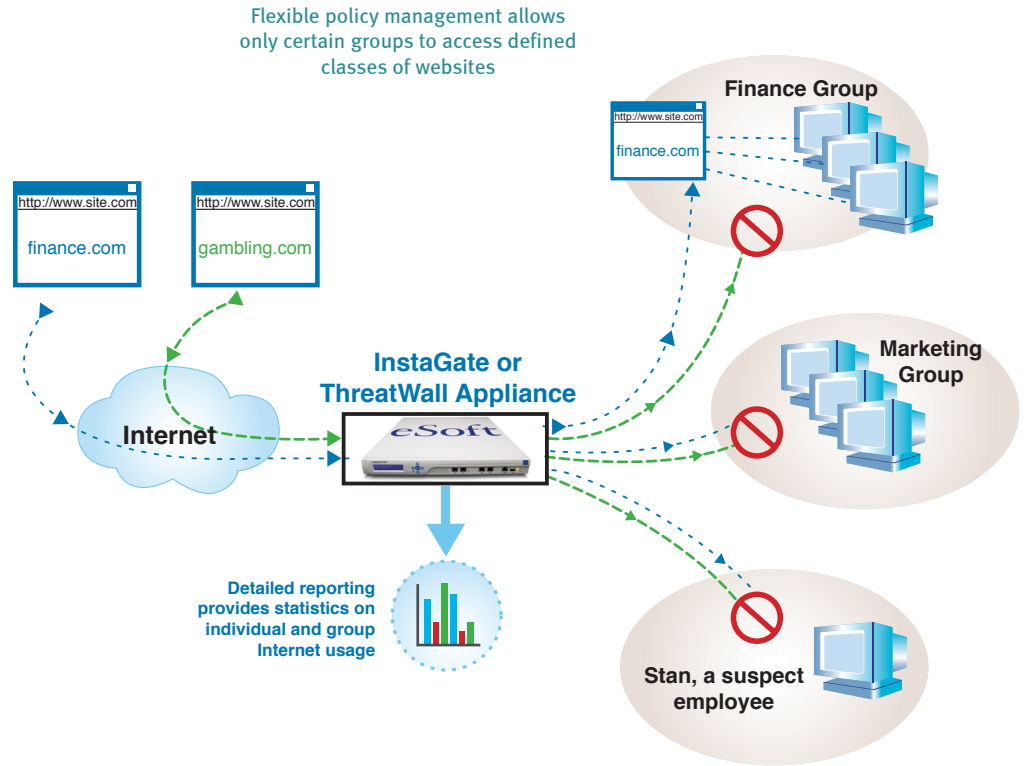

SiteFilter is a crucial tool for the organization to re-gain control of work-day Internet usage.
